

HYK-SVC-AO-3 伺服阀控制器

HYK-SVC-AO-3 servo valve controllers

产品简介

Product overview

伺服阀控制器 HYKSVC-AO-3 是为伺服阀而设计的一款控制电路，可以将客户的 PLC、工控机等前端控制器输出的三路控制信号，同时转换为伺服阀可接受的电流信号，且互不干扰，能够配合伺服阀调整相关参数，同时含外置调零偏、调增益、输入输出保护等功能。

HYKSVC-AO-3 servo valve controller is a control circuit especially designed for the servo valve. It can convert three-circuit control signals output by PLC, industrial personal computer and other front-end controllers provided by customers into the signals that the servo valve can accept, without mutual interference. Besides, it can cooperate with the servo valve to adjust relevant parameters and has such functions as external zero bias adjustment, gain adjustment, input and output protection.

安装尺寸 (单位: mm)

Mounting dimension (unit: mm)

功能特性及技术参数

Functional characteristics and technical parameters

使用条件 Service conditions s	
供电 Power supply	参见供电选择 Refer to power supply selection
连接线 Connecting wire	建议采用每根大于或等于 0.3 平方毫米屏蔽电缆 The shielded cable greater than or equal to 0.3 mm ² is recommended
环境温度 Ambient temperature	-20°C ~ 80°C
环境湿度 Ambient temperature	35-85%RH
环境气体 Environmental gas	周围无腐蚀性气体 No corrosive gas around
电磁干扰 Electromagnetic interference	周围无强的电磁干扰波 No strong electromagnetic interference around
振动 Vibration	无剧烈振动 No violent vibration

性能 Performance		
静态 Static	线性度 Linearity	1%
	零偏 Zero bias	1%
	对称度 Symmetry	1%
	温漂 Warm-up drift	小于 90ppm/°C Less than 90ppm/°C
动态 Dynamic	频宽 Band	≥200Hz 也可以根据客户特殊需要定制 ≥200Hz can also be customized according to the special needs of customers

物理特征 Physical characteristics	
重量 Weight	1.1kg
尺寸 Size	155mmX147mmX55mm (4 个安装孔) 155mm X 147mm X 55mm (4 mounting holes)

功能 Function		
输入 CMD Input CMD	参见控制信号选择 Refer to control signal selection	
输出 SV Output SV	参见阀控电流选择 Refer to selection of valve control current	
使能: Disable-SVC Enable: Disable-SVC	可以控制阀控电流的通断: 给 Disable-SVC 一个 5V 信号, SV 输出断开; Disable-SVC 接 GND 或空接时, SV 输出电流, 控制器正常工作 Disable-SVC is connected to GND or null, SV outputs current, and the controller works normally	
低通滤波 Low pass filtering	可以减少干扰-80dB,根据客户要求来定截止频率 Be able to reduce -80dB disturbance; the cut-off frequency is determined as required by customers	
信号调整 Signal adjustment	可以根据客户特殊需要选择 Be able to choose as required by customers	
颤振 Flutter	改善伺服阀静态精度 Improve static accuracy of servo valve	
调整 Adjustment	零偏 Zero bias	调整阀的零偏 Adjust zero bias of the valve
	增益 Gain	调整阀的增益 Adjust gain of the valve
保护 Protection	输入级 Input level	单向信号输入反接, 输出自动断开 Reverse connection of one-way signal input, automatic output disconnection $\leq 10V$ 限压输入, $\leq 100mA$ 限流输入 $\leq 10V$ input with limited voltage, $\leq 100mA$ input with limited current.
	输出级 Output level	1.5 倍 SV 限流输出 1.5 times of SV output with limited current

接线方式

Wiring mode

HYK-SVC-AO-3A01 ($\pm 15VDC$ 供电)

HYK-SVC-AO-3A01 ($\pm 15VDC$ power supply)

用户的前端控制器与该控制器以及阀的连接示意图如图 3-1 所示。

The connection diagram of the user's front-end controller with the controller and the valve is shown in Fig. 3-1.

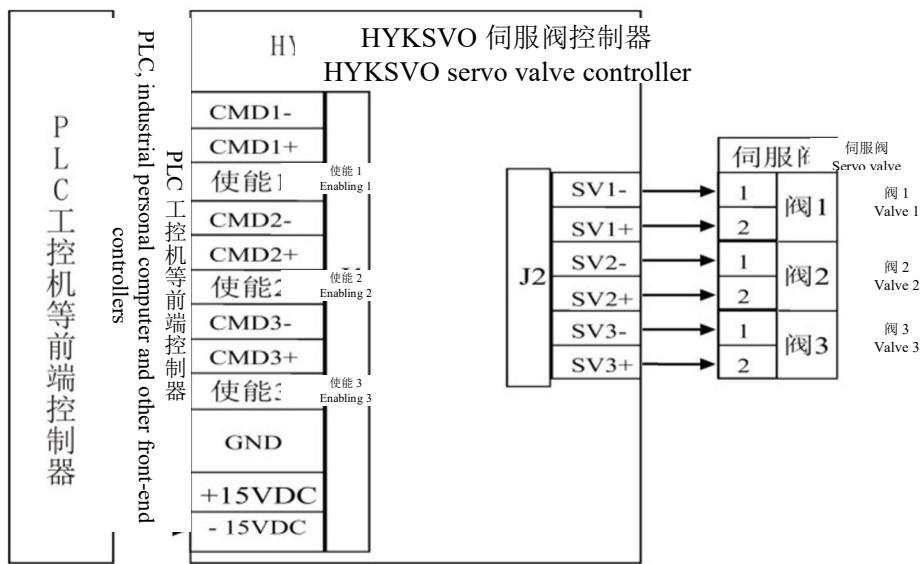

图 3-1 连接示意图

Fig. 3-1 Connection Diagram

注：前端控制器的“GND”、供电电源的“GND”要与 HYK-SVC-A0-3 控制器的“GND”共 GND

Note: “GND” of the front-end controller and “GND” of power supply shall share GND with “GND” of HYK-SVC-A0-3 controller.
